

Equipment Operator License (EOL)

We provide detailed skill and knowledge assessment combined with personalized training for your crew. The assessment can be carried out exclusively on rig / vessel, or in combination with a simulator.

EOL consists of:

- Customer selection of equipment and systems
- Assessor gap analysis:
 - » Knowledge of equipment and systems (theory)
 - » Standards of performance in simulator (optional)
 - » Standards of performance on rig / vessel
- Training to improve knowledge and standards of performance (if knowledge gaps detected)

The participant must fully understand all functions and alarms of the original equipment, fulfill all related safety requirements and operate the equipment and utilize the control system effectively.

Assessment Goals:

- Verify skills of operators in accordance to predetermined objectives.
- Identify skill and knowledge gaps.
- Improve operations by training the participant to use the equipment/ systems safely and efficiently according to NOV standards.
